Sequence 14, Application US/09052778A

Patent No. 6060590

GENERAL INFORMATION:
APPLICANT: Bryant, Peter J.
APPLICANT: Bryant, Razuo
TITLE OF INVENTION: CHITINASE RELATED PROTEINS AND METHODS
TITLE OF INVENTION: CHITINASE RELATED PROTEINS AND METHODS
FILE REFERENCE: 07306/015001
CURRENT APPLICATION NUMBER: US/09/052,778A
CURRENT FILING DATE: 1998-03-31
NUMBER OF SEQ ID NOS: 16
SOFTWARE: FastSEQ for Windows Version 4.0
SEQ ID NO 14

Sequence 6, Application US/09296284A

Patent No. 6204040

GENERAL INFORMATION:
APPLICANT: Choi, Eui-Sung

APPLICANT: Rhee, Sang-Ki

APPLICANT: Lee, Eun-Hae

TITLE OF INVENTION: Glucenobacter Suboxydans Sorbitol Dehydrogenase, Genes

TITLE OF INVENTION: and Methods of Use Thereof

TITLE OF INVENTION: Glucenobacter Suboxydans Sorbitol Dehydrogenase, Genes

TITLE OF INVENTION: 401 Methods of Use Thereof

TITLE OF INVENTION: 1999-04-22

CURRENT APPLICATION NUMBER: US/09/296,284A

SOFFWARE: Patentin Ver. 2.0

SEQ ID NO 6

## Mouse serine protease BSSP5 (mBSSP5) SEQ ID NO:4. Š AAB11711 standard; Protein; 264 23-OCT-2000 (first entry) AAB11711;

BSSP5; serine protease; human; hBSSP5; mouse; mBSSP5; brain; diagnostic marker; antibody; transgenic animal; Alzheimer's disease; epilepsy; cancer; inflammation; infertility; pancreatitis; prostatic hypertrophy.

Mitsui Uemura H, Okui A, Kominami K, Yamaguchi N, 99WO-JP06473 98JP-0347806 (FUSO ) FUSO PHARM IND LTD. WO200031243-A1. 20-NOV-1998; 19-NOV-1999; 02-JUN-2000. Mus sp. 

Serine proteases BSSP5, useful in detecting homologs, mutants and WPI; 2000-400058/34. N-PSDB; AAA61734.

ŝ

```
The invention relates to novel serine proteases designated BSSP5

(AAB11710-B11711), and to nucleic acids encoding them (AAA61733-A61734).

The invention also relates to vectors and transformants comprising BSSP5 nucleic acids, transgenic animals in which the expression level of BSSP5 nucleic acids, transgenic animals in which the expression level of BSSP5 can be varied; and an mBSSP5 knockout mouse. The invention additionally encompasses anti-BSSP5 antibodies and methods of production of such antibodies, methods of BSSP5 detection using the antibodies, and the use of BSSP5 proteins or fragments as diagnostic markers for certain medical conditions, e.g., pancreatitis. A method for detecting pancreatitis comprising measuring BSSP5 concentration in the blood or urine, and a pancreatitis diagnostic agent containing an anti-BSSP5 antibody is also disclosed. Nucleotides encoding BSSP5 were initially isolated in a human brain cDNA library using degenerate PCR primers (AAA61745) based on conserved regions of serine proteases. The BSSP5 serine proteases and nucleotides encoding them are useful in a BSSP5 serine proteases and nucleotides encoding than are useful in a samples (e.g., blood, urine, brain, prostate gland, placenta, testis, pancreas and spleen) as diagnostic markers for conditions such as pancreatitis and prostatic hypertrophy. Sequence AAB11710 represents murine BSSP5 (hBSSP5), and sequence AAB1711 represents murine BSSP5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        BSSP5; serine protease; human; hBSSP5; mouse; mBSSP5; brain; diagnostic marker; antibody; transgenic animal; Alzheimer's disease; epilepsy; cancer: inflammation; infertility; pancreatitis; prostatic hypertrophy.
polymorphic variants as markers for diagnosis of e.g. Alzheimer's disease, epilepsy, cancer and inflammation, using blood, urine, pancreas or other tissues

Serine proteases BSSP5, useful in detecting homologs, mutants and

ö

```
The invention relates to novel serine proteases designated BSSP5

(AAB11710-B11711), and to nucleic acids encoding them (AAA61733-A61734).

The invention also relates to vectors and transformants comprising BSSP5

nucleic acids; transgenic animals in which the expression level of BSSP5

can be varied; and an mBSSP5 knockout mouse. The invention additionally

encompasses anti-BSSP5 antibodies and methods of production of such

antibodies, methods of BSSP5 detection using the antibodies, and the

cuse of BSSP5 proteins or fragments as diagnostic markers for certain

medical conditions, e.g., pancreatitis. A method for detecting

pancreatitis comprising measuring BSSP5 concentration in the blood or

urine, and a pancreatitis diagnostic agent containing an anti-BSSP5

antibody is also disclosed. Nucleotides encoding BSSP5 were initially
isolated in a human brain cDNA library using degenerate PCR primers

(AAA61744-A61745) based on conserved regions of serine proteases. The
BSSP5 serine proteases and nucleotides encoding them are useful in
detecting homologues, mutants and polymorphic variants in biological

samples (e.g., blood, urine, brain, prostate gland, placenta, testis,
pancrear and spleen) as diagnostic markers for conditions as
conditions, and spleen) as diagnostic markers for conditions as
conditions, and spleen) as diagnostic markers for conditions.

AAY65438 represent the EST-related proteins. AAY6651 to
AAY65438 represent the EST-related proteins corresponding to AA24265 to
AAX465438 represent the EST-related proteins corresponding to AA242265 to
AAX46552. They can be used for producing secreted human gene
EST control to development stage, rate, and quantity of protein synthesis, as
regions (UTRs) and upstream regulatory regions which control the
CST control, development stage, rate, and quantity of protein synthesis, as
well as stability of mRNA. The ESTs are also useful as probes for
Chromosome mapping, and to obtain full length cDNA clones. The ESTs can
also be used in forensic procedures to identify individuals, or in
C diagnostic procedures to identify individuals having genetic diseases
resulting from abnormal gene expression. The products may also be used in
CST control of a polypeptide into a membrane, or importing a polypeptide
CST into a cell. The proteins encoded by the EST sequences may be useful in
C treating a variety of human conditions. Secreted proteins have
CST chrambele. AAA42249 to AAA42264 and AAX64644 to AAX6666 represent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human; protease; cancer; immune-related disorder; cardiovascular disease; neuronal-associated disease; metabolic disorder; inflammatory disorder; nervous system disorder; sexual dysfunction; pain; mood disorder; hypertension; psychotic disorder; neurological disorder; dyskinesia; viral infection; human immunodeficiency virus; HIV; non-viral infection; ocular disease; cytostatic; enzyme.

The sequences of the invention are useful for treating diseases and disorders such as cancers (e.g. breast, colon, lung), immune-related diseases and disorders (e.g. inflammatory diseases and asthma), cardiovascular diseases (e.g. inflammatory diseases and coronary thrombosis), brain or neuronal-associated diseases, metabolic disorders (e.g. diabetes, obesity), inflammatory disorders (e.g. rheumatoid arthritis and psoriasis), central or peripheral nervous system diseases, migraines, pain, sexual dysfunction, mod disorders, attention disorders, ophicial disorders, hypotension, hypertension, psychotic disorders, neurological disorders, hypotension, hypertension, psychotic disorders, neurological disorders.

(e.g. Alzheimer's disease, Parkinson's disease) and dyskinesias.

The nucleic acids and polypeptides are also useful for treating viral infections caused by human immunodeficiency virus (HIV), and non-viral infections such as ocular disease (e.g. glaucoma) and macular disease of contractions caused by human issued (e.g. glaucoma) and macular
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human; pancreas; pancreatic cancer; pancreatic cancer antigen; detection; diagnosis; identification; cytostatic; neuroprotective; nootropic; immunomodulatory; relaxant; contraceptive; gynaecological; antiinflammatory; cardiant; gene therapy; chromosome mapping; linkage analysis; tissue identification; tissue typing; forensic; neural; immune system; muscular; reproductive; gastrointestinal; pulmonary; cardiovascular; renal; proliferative.
                                       treating diseases and disorders such as cancers, immune-related diseases and disorders, cardiovascular disease (e.g. restenosis) and inflammatory disorders -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ò
                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                     AMX40251 to AAX40397 represent 5' expressed sequence tags (ESTs) for human secreted proteins, and encode the proteins given in AAY11533 to AAX11679. respectively. The proteins given represent the signal peptide and an N-terminal fragment of a secreted protein. The nucleic acid sequences can be used for producing secreted human gene products. They can also be used to develop products for diagnosis and therapy. The proteins obtained may have cytokine activity, coll proliferation/differentiation activity, haematopoiesis regulating activity, issue growth regulating activity, respectively haemostatic and thrombolytic activity, receptor/ ligand activity, anti-inflammatory activity, tumour inhibition activity or other activity and includes activity and activity and activity.
                                                                                                                                                                                                                                can be used in forensic, gene therapy and chromosome mapping procedures. The sequences can also be used for obtaining corresponding promoter sequences. The nucleic acids encoding the signal peptide can be used for directing extracellular secretion of a polypeptide or the insertion of a polypeptide into a membrane, or importing a polypeptide into a cell.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               products

receptor (GPCR) or a protein 95% identical to the GPCR, a specific active portion and its encoding polynuclectide. Also included are an agonist, antagonist or inhibitor of the GPCR or the polynuclectide, a vector.

Comprising the polynuclectide, a cell transformed by the vector, a non-thuman mammal comprising a partial or total deletion of the polynuclectide encoding the receptor and screening (detection and possibly, recovering) of compounds which are known or not known to be agonist, antagonists or inhibitors of natural compounds to the GPCR. The receptor-derived agonists, antagonists, inhibitors or compounds are used as an improvement, elimination or substitution of an existing taste and/or a fragrance of (or in) the food and/or cosmetic products. They can also be used in the preparation of medicament in the treatment and/or prevention of a mammalian disorders, including anxiety, schizophrenia, manic depression, depression, for promoting axonal growth, nerve cell connection and nerve regeneration for modulating male and female
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human; olfactory receptor; OR; primary scent determination; secondary scent determination; polypeptide library; odour receptor; scent profile; scent fingerprint; scent representation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New polynucleotides which encode polypeptides involved in olfactory sensation for identifying olfactory agonists and antagonists -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      behaviours, such as stimulation or suppression of appetite, sexual motivation, sexual attraction, aggression and for promoting or suppressing chemical communication between organisms. The present
                                                                              invention relates to olfactory and Pheromone G-protein coupled
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          sequence is a human olfactory and pheromone GPCR protein sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 prevention or the treatment by stimulation of several mammalian
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö

                                              The present sequence is an olfactory receptor which is encoded by one of a number of novel polynucleotides. The polynucleotides can be used in screening for olfactory agonists and antagonists. The methods allow for the determination of primary scents and the identification of the odour receptors used to detect these primary scents. The methods also enable determination of secondary scents and the identification of combinations of odour receptors that are involved in detecting such secondary scents. This enables the construction of a scent representation (also called a scent fingerprint or scent profile), which may be used to re-create and edit scents. Libraries of olfactory receptors are useful for determining the interaction pattern of a composition with the receptors, and can be used for determining differences in the olfactory faculties of different individuals.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present sequence is an olfactory receptor which is encoded by one of a number of novel polynuclectides. The present sequence is a polypeptide encoded by one of 344 newly mined human genes. It was used as a query sequence in a database search of chuman genes. It was used as a query sequence in a database search of chiactory receptor (ON) like sequences. The invention relates to isolated polynucleotides encoding polypeptides involved in olfactory sensation. The polynucleotides can be used in screening for olfactory agonists and antagonists. The methods allow for the determination of primary scents and the identification of the odour receptors used to detect these primary scents. The methods also enable determination of secondary scents and the identification of combinations of odour receptors that are involved in detecting such secondary scents. This enables the construction of a scent representation (also called a scent fingerprint or scent profile), which may be used to re-create and edit scents. Libraries of olfactory receptors are useful for determining the interaction pattern of a composition with the receptors, and can be individuals.
                                                                                                                                                                                                                                                                                                                                                               ö
(also called a scent fingerprint or scent profile), which may be used to re-create and edit scents. Libraries of olfactory receptors are useful for determining the interaction pattern of a composition with the receptors, and can be used for determining differences in the olfactory faculties of different individuals.
                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human; olfactory receptor; OR; primary scent determination; secondary scent determination; polypeptide library; odour receptor; scent profile; scent fingerprint; scent representation.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present sequence is the protein sequence for the Drosophila melanogaster imaginal disc growth factor 3 (IGGF3). The sequence encoding this protein was used to isolate the IDGF4 coding sequence. IDGF4 is a member of the chitinase related proteins (CHRP) and is involved in the protein are expected to have mammalian homologues. The gene and the treatment of cancer, wound healing, tissue regeneration following arthritis, osteoporosis, other skeletal disorders and burns, for arthritis, osteoporosis, other skeletal disorders and burns, for arthritis, osteoporosis, other skeletal disorders and burns, for cevitalising scar tissue resulting from surgical procedures, irradiation, laceration, toxic chemicals, viral or bacterial infection or burns, to promote tissue growth during tissue engineering, for example tissues for skin graft replacements and bone regrowth, and to modulate the function of the female reproductive tract. In addition, they can also be used to increase meat, egg, sperm and milk production in animals. One possible method of use is by gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1;

                                                                                                                                                                                                                                                                            The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                      capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental blology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmacecutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30311), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human; secreted protein; EST; expressed sequence tag; diagnosis; forensic; gene therapy; chromosome mapping; signal peptide; upstream regulatory sequence; cytokine activity; cell proliferation;
The invention relates to an isolated nucleic acid detection reagent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ï

                                                                                                                                                                                                                                                                                                                                                              human secreted proteins, and encode the proteins given in AAY11533 to human secreted proteins, and encode the proteins given in AAY11533 to AAY11679, respectively. The proteins given represent the signal peptide and an N-terminal fragment of a secreted protein. The nucleic acid sequences can be used for producing secreted human gene products. They can also be used to develop products for diagnosis and therapy. The proteins obtained may have crytokine activity, cell proteins obtained may have crytokine activity, cell proteins obtained may have crytokine activity, haematopoiesis requiating activity, tissue growth regulating activity, reproductive hormone regulating activity, receptor/ligand activity, haemostatic and thrombolytic activity, receptor/ligand activity, anti-inflammatory activity, tumour inhibition activity or other activities. The products can be used in forensic, gene therapy and chromosome mapping proceducts. The sequences can also be used for obtaining corresponding promoter sequences. The nucleic acids encoding the signal peptide can be used for directing extracellular secretion of a polypeptide or the insertion of a polypeptide into a membrane, or importing a polypeptide into a cell.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
